European gigafactory capacity, 2025 and 2030 pipeline

Velstrand Research, proprietary research. Topic: gigafactories. Region: Europe. Period: 2025-2030.

Executive summary

The five largest operational gigafactories in Europe had a combined nameplate capacity of 135.9 GWh per year in 2025.

The same five sites plan to reach 268.9 GWh per year by 2030, for a total announced investment of 16.96 billion EUR.

Operational capacity by site, 2025

Nameplate capacity of operational sites at the end of 2025, GWh per year.

Site	Operator	Capacity 2025 (GWh/yr)
Gdansk	Aurelion Cells	42.5
Debrecen	Kestrel Energy Storage	36.8
Magdeburg	Valmora Batteries	27.3
Lulea	Brightwell Power	16.4
Dunkirk	Ferrovolt	12.9

Planned capacity and investment, 2030

Planned nameplate capacity in 2030 and announced investment for the same sites.

Site	Planned 2030 (GWh/yr)	Investment (EUR bn)
Gdansk	78.2	4.85
Debrecen	64.5	3.92
Magdeburg	51.6	3.37
Lulea	33.9	2.64
Dunkirk	40.7	2.18

Methodology

Operational capacity counts only production lines that shipped cells to customers in 2025. Announced projects without a final investment decision are excluded.

Data comes from site visits, operator disclosures and permits filed in 11 countries.
